EDUCATION

Bachelor of Science in Computer Science

University of Texas at San Antonio

Expected May 2028

San Antonio, TX

EXPERIENCE

Undergraduate Research Assistant, Full Stack Developer

Data Analytics Center, UTSA

Jan. 2026 – Present

San Antonio, TX

- Engineer data retrieval and profiling tools with Next.js, FastAPI, and SQL, enabling researchers to independently explore **239+ tables** and datasets containing up to **2B+ records**
- Architect and develop DAC's administration platform with Next.js and Go, unifying research tools, user management, access control, and LLM API provisioning in a single interface
- Develop a Canvas-integrated AI learning platform with course-aware retrieval, tool calling, and response validation, enabling personalized study guidance through interactive, LLM-generated interfaces
- Build a voice-enabled AI assistant with speech recognition and ElevenLabs synthesis, providing hands-free access to contextual office information through natural-language conversations

Full Stack Developer, Team Lead & RowdyHacks Tech Director

Association for Computing Machinery, UTSA

Sep. 2025 – Present

San Antonio, TX

- Lead a 10-member engineering team developing HackKit, directing system architecture, code reviews, task allocation, and product design to establish a reusable hackathon management platform
- Led an 8-member development team to build and deploy RowdyHacks' event management and judging platforms, supporting registration, operations, and project evaluation for a **500-participant** hackathon
- Define HackKit's developer experience and UX architecture, establishing reusable components and streamlined development workflows for a platform designed to support 10 hackathons with **400–800** participants each

Software Developer

Baku State University

Sep. 2023 – Jun. 2024

Baku, Azerbaijan

- Developed React interfaces for a university learning management system, moving attendance, assignments, grading, and course materials from paper to online workflows
- Built reusable React components and helped establish the design system, giving a 16-member development team consistent UI patterns for student and faculty interfaces
- Helped deliver a pilot serving **2,000+ students** across multiple departments, with the platform later expanding university-wide at a university of **25,000 students**

PROJECTS

HackKit | Next.js, TypeScript, Docker, Cloudflare, AWS

2025 – Present

- Designed a modular Next.js monorepo for hackathon management, supporting registration, scheduling, check-in, analytics, and email workflows across approximately 10 events
- Built reusable UI and administration packages with role-based access control, supporting configurable hackathon operations for 400–800 participants per event
- Developed containerized deployment infrastructure with Docker, Cloudflare, and AWS, enabling reusable application deployments across multiple hackathons

Rufy Programming Language | C, GCC, Data Structures, Memory Management

2025

- Built Rufy, an interpreted programming language in C with support for functions, recursion, and a standard library, taking the project from initial design to a working interpreter
- Implemented a hand-written lexer and recursive-descent parser to process source code, integrating reference-counted memory management to handle runtime values and object lifetimes

TECHNICAL SKILLS

Languages | Python, Java, C, Go, SQL, TypeScript, JavaScript, PHP

Frameworks | Next.js, React, React Native, Node.js, Django, Laravel, REST APIs

Data | PostgreSQL, MySQL, Elasticsearch, LLM Applications

Tools & Cloud | Git, Docker, AWS, Cloudflare, Google Cloud Platform, Linux, GCC
